Executive summary

The signal logging will be done by the different project partners (DAF, Volvo, IFSSTAR, Fraunhofer) which all use a certain method to gather and save the signals. For simulation purpose the different data formats will be converted to the Comma Separated Values format or to MATLAB files.

The planned process will be that the project partners upload their data to the Fraunhofer IVI server, from where the data can be accessed by all partners. The conversion will then be made locally at TNO and ViF.
